AMERICA'S CENTER PROGRESS REPORT

October 2023
Vol. 5

Construction of the 72,000 sq. ft. exhibit space expansion on the west side of the complex is proceeding on-plan and the building envelop is taking shape. Installation of mechanicals and pouring of dock and exhibit hall flooring is nearing completion with these two projects set to be completed in early 2024. This will bring the total available exhibit space at America's Center to 574,000 sq. ft.

The footprint of the new west entrance located at Martin Luther King Dr. and 9th Street is established, making way for foundation and steel work to commence.

On the east side of the complex near the Convention Plaza Entrance, construction is completed after demolishing a circa 1962 privately owned parking garage and converting it into a paved and gated lot for staff parking.
